# Getting Started

## Hello!

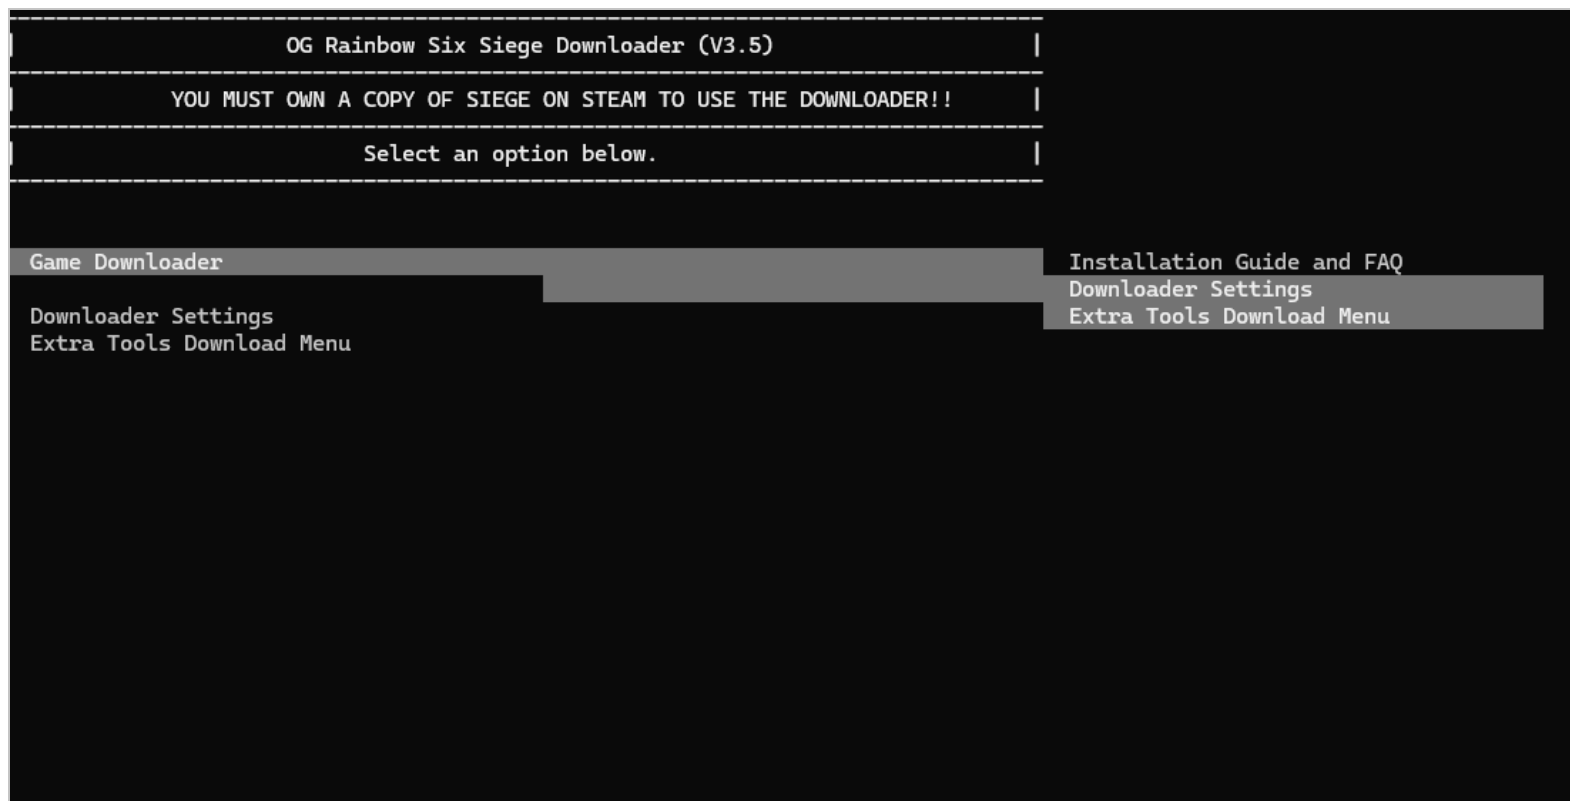

Welcome to Calan's Old R6 Mania, this took too long, I was bored and was banned from R6 for 24 hours so this just helped me lock in. You can mostly ignore the first two collapsed sections but you will need to setup the VPN otherwise we cant play with each other (>ω< )

## R6 Downloader Setup

Calan will inform you what version to play. In most cases it's available on the CDN that he has setup with R6 Downloads (Calan will supply the link when it happens), but if not here's what to do:

### Setting up R6 Downloader

1. Download R6 Downloader ([https://r6downloads.b-cdn.net/R6Downloader\\_V3\\_5.exe](https://r6downloads.b-cdn.net/R6Downloader_V3_5.exe))
2. Press Arrows and Enter to navigate the menu.

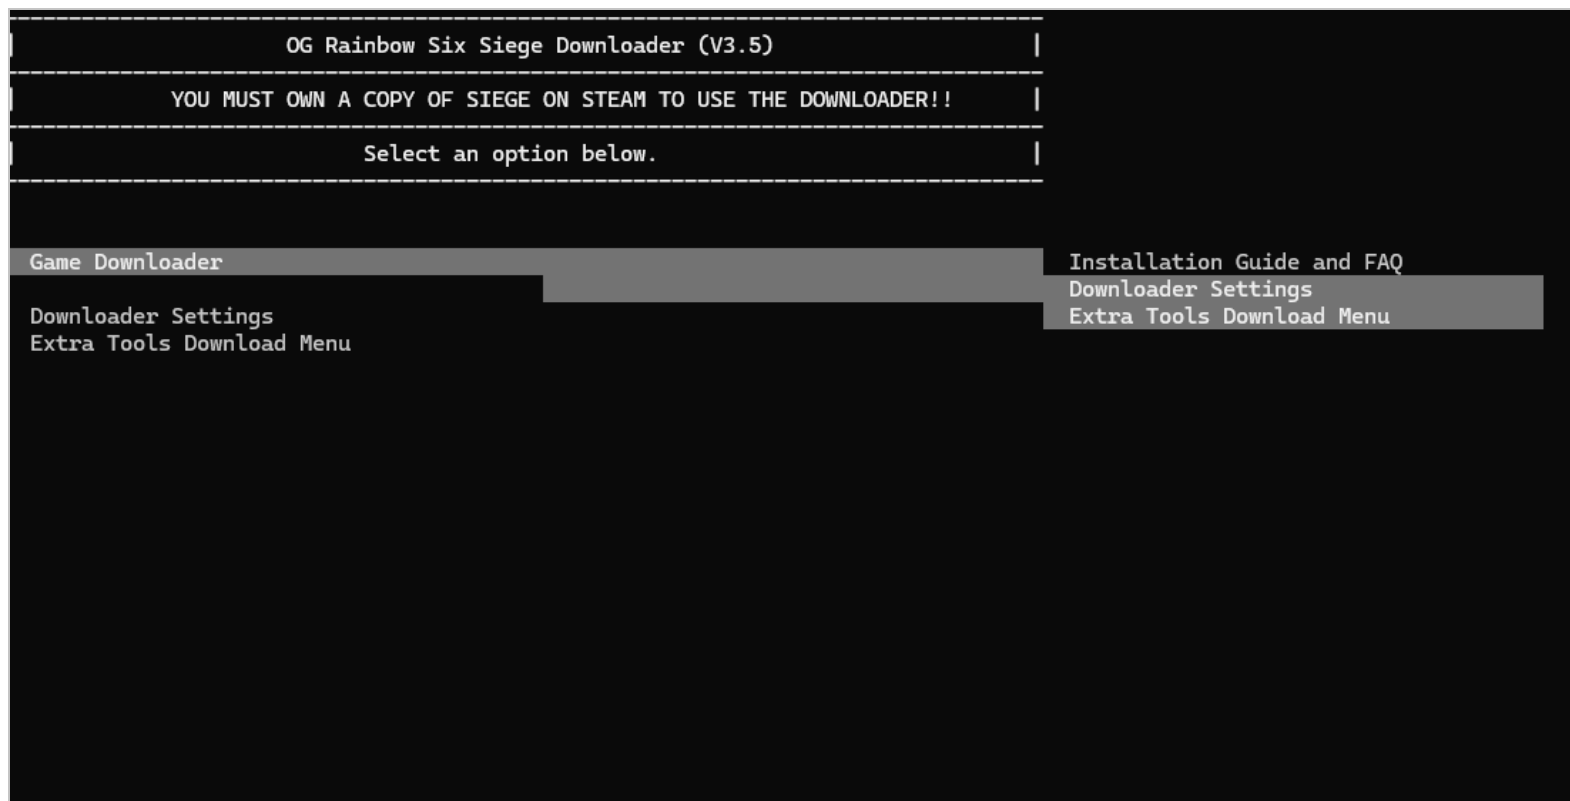

completion suggestions for procedure

## Downloading From the CDN

### Now it's CDN time! (Super Easy Method)

1. CDN Links! ([CDN Links](#))
2. Press **Arrows** and **Enter** to navigate the menu.

completion suggestions for procedure

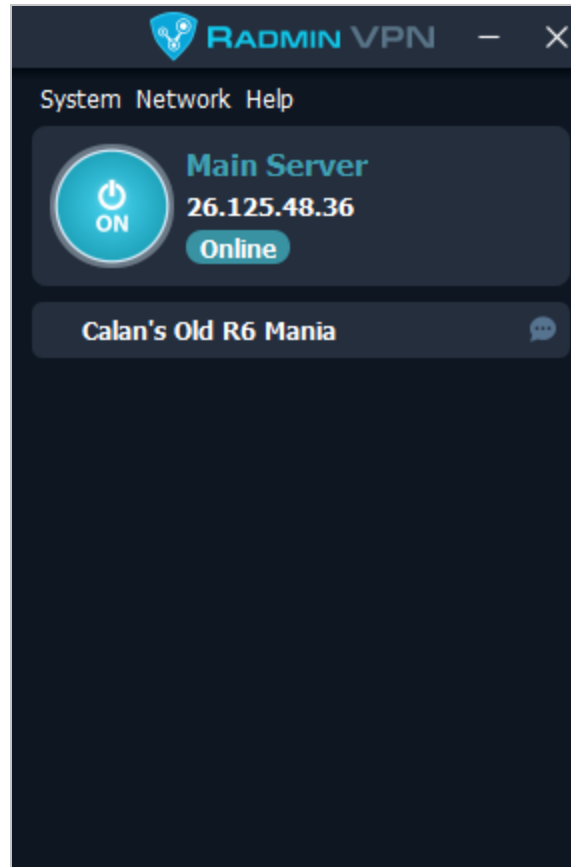

## Setting Up Multiplayer

Because the servers for the old versions are no longer online you have to create local customs. No issue though as you can use a VPN to Calan's Computer to make it seem like you are on the same network to R6 Siege

### Setting up Radmin VPN

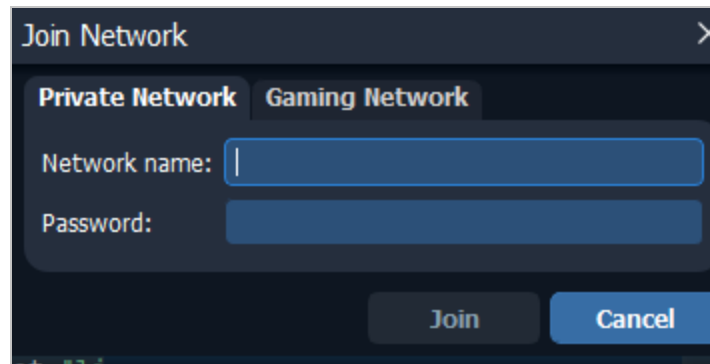

1. Download RadminVPN (<https://www.radmin-vpn.com>)

2. Open Radmin VPN and skip through the creation wizard, whatever you type it doesn't matter.
3. The following is what Radmin VPN should look like once installed and opened.

completion suggestions for procedure

4. Press `Network` and then on `Join` + `Network` to open the server finding menu it should look like the following.

completion suggestions for procedure

You now need to type in the following credentials to the `Private` + `Network` area

Network name: Calan's Old R6 Mania  
Password: 4THGROUPOPTOP!

**Remember to run RainbowSix.bat and not RainbowSix.exe! Otherwise, the Anti Cheat will prevent the VPN usage!**
